

## EN Brief instructions on getting started with Windows® 7

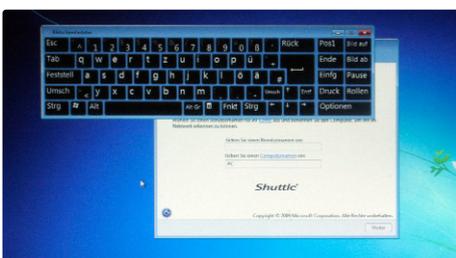

1. Make a note of the Windows 7 "Product Key", which can be found underneath or at the rear of your PC. You will need to have this "Product Key" (serial number) to hand later on. For more information, please refer to the "Windows 7 Product Key" info sheet.
2. Switch on your monitor (does not apply for All-in-One PCs).
3. Switch on your Shuttle Mini-PC complete system.
4. The PC starts up and "Windows Setup" guides you step by step through initial installation.
5. First of all, enter your desired settings in "Country/Region", "Time and Currency" and "Keyboard layout". Then click "Next".

6. Now enter a "User name" for yourself and choose a "Computer name" for your new PC. Then click "Next".

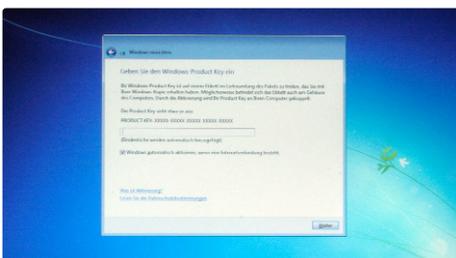

**NOTE:** If your new PC has a touchscreen and no keyboard is connected, touch the blue icon at the left edge of the window. You can now enter "Text without keyboard" using the on-screen keyboard. Select the relevant checkbox and confirm your selection with "OK". This displays an on-screen keyboard for use with stylus, mouse or finger.

- 7.** For security reasons we recommend you specify a password in the following screen. To prevent typing errors, the password has to be entered twice. You can also store a password hint as a memory aid. Then click "Next".

- 8.** Now enter your Windows 7 "Product Key". The "Product Key" is printed on a sticker underneath or at the rear of your PC. Alternatively, you have the option of entering the "Product Key" after completing the First Steps. You can find further information on the "Product Key" and Windows 7 activation in the "Windows 7 Activation" info sheet. Then click "Next".

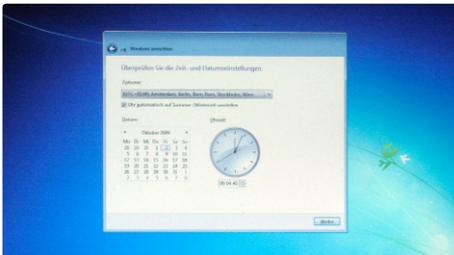

- 9.** Make sure you read the licence terms and conditions carefully and, if you agree with them, confirm by selecting the checkbox and clicking "Next".

- 10.** Here you can specify which and how many updates you want for Windows 7. For optimal protection of your new PC, you should use the "Recommended Settings".

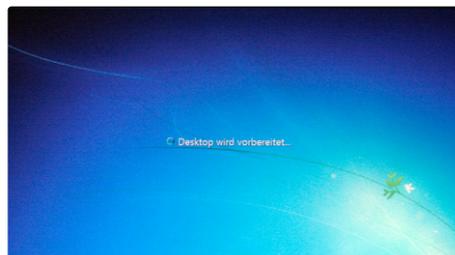

11. Now check the time zone, date and time and correct, if necessary. Then click "Next".

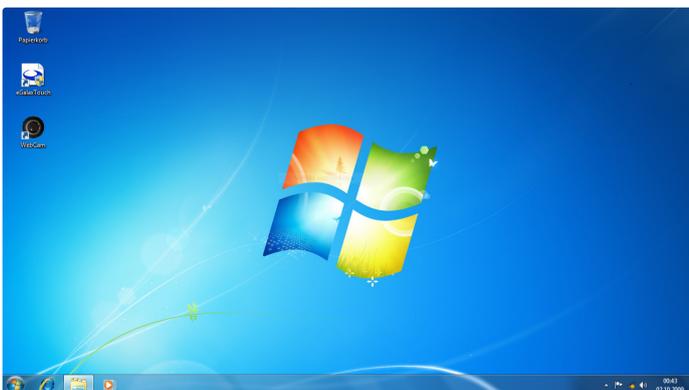

12. If your PC has an active WLAN connection or a network cable is fitted, you can now start to specify the network settings.

13. The initial installation is then completed automatically.

14. After initial installation you can now start to use your new PC with Windows 7 operating system.

We hope you enjoy your Shuttle product!
