

The PD01 enables power supply of the EN01 via PoE

The optional Shuttle Accessory PD01 is a daughterboard for the EN01 series which provides a second Gigabit network port with Power-over-Ethernet (PoE) function. This enables the EN01 to receive power over the same network cable that transports data, and so does away with the need for a nearby power outlet. The power comes from a PoE-enabled Ethernet switch or from a power injector at the other end of the network cable.

Shuttle Accessory **PD01** PoE kit for EN01

Feature Highlights

Contents	<ul style="list-style-type: none"> • PoE daughterboard with RJ45 network connector • 8x standoff (4 of these have a marking) • Adhesive membrane • Quick Guide
Technical Data	<ul style="list-style-type: none"> • Power sourcing equipment (PSE): up to 30W (48V / 0.65A) Supports 802.3AT PoE standard • LAN controller: Realtek RTL8119I supports 1 Gbps
Compatibility	<ul style="list-style-type: none"> • Compatible with the following Shuttle products: Shuttle Edge EN01J3, EN01J4, EN01E, EN01B

Product Comparison: PoE Accessory for EN01

PD01	PSE01
Adding PD01 allows the EN01 to be powered over the LAN cable and thus it becomes a Powered Device (PD).	The PSE01 makes the EN01 act as Power Sourcing Equipment (PSE) that carries both data and operating voltage to a connected network device, such as an IP camera.
